

Value-Box

Asset Storage Solutions
with Accountability!

Value-Box Frameless. Efficient management with smart booking function

Value-Box Frameless is a secure and robust storage solution for managing and distributing keys, items, and valuables. With KeyWin's booking functions and controlled management, the administrator can easily book storage space for various needs, such as reserving, depositing, or retrieving items.

The main cabinet features a backlit keypad and a QR code reader for easy access. An LED light strip separates the main unit from the drawers and also functions as a status indicator. The drawers open with a controlled motion, and light seeps out to signal the user to open the drawer completely.

The modular inserts provide a premium feel and can be customized for keys, phones, or other items. Up to 15 expansion cabinets can be connected, increasing capacity flexibly by 10 drawers at a time.

KEYWIN6

KeyWin makes it easy and clear to manage bookings. The booking view is displayed in real time, showing the status of the drawers according to the booking types: Available, Reservation for a specific period, Drop-off for depositing items, and Pickup for retrieving items.

Key-Box

Value-Box Asset Storage Solutions

Visual booking function

KeyWin's visual booking view presents each storage space as a card with current availability, booking type, and status. Booking information with a PIN or QR code is automatically sent to the user via email, and bookings are easily managed through the interface. All events are logged in real time for increased security and traceability, providing a clear overview and administration.

LOCKER 5
Pickup pending for
Johan Persson

Reservation

If a user needs repeated access to the storage over an extended period, the administrator can easily create a reservation to provide smooth and controlled access.

Drop-off

If you are expecting an item from a customer, the administrator can create a Drop-off that links the user to the drawer. The customer receives access with a code to deposit the item.

Pickup

If you need to distribute an item to a customer, the administrator can create a Pickup. Once the booking is made, a code is generated to place the item in the drawer. The customer then receives access to the drawer with a code to retrieve the item.

Asset Storage Solutions with Accountability!

Expandable up to 158 storage compartments

Ordering The Value-Box Locker System is easy

Frameless Master Control Unit 8D

Value-Box L Series

KeyBox Frameless Control Efficient key management with smart booking functionality

KeyBox Frameless Control is a secure, connected solution for managing and issuing keys. With KeyWin's booking functionality and controlled access, administrators can easily reserve storage compartments for users for various purposes, such as reservations, drop-offs or pickups.

A robust construction combined with our clean Frameless Minimal design language gives the product a refined and discreet appearance, making it equally suitable for reception areas, entrances, technical rooms and storage facilities. The main unit features an LED light strip at the top that serves as a status indicator. Below the light strip, a QR code reader and a backlit keypad provide simple identification and access. The ten individual storage compartments open with a motion, giving users quick access to the correct key or item.

The storage compartments can be used for keys or smaller items such as access cards, documents or other equipment that needs to be handed over together with a key. Up to 15 expansion cabinets can be connected, making it easy to scale the solution as your organisation's needs grow.

Key-Box Key Systems and Asset Lockers are Powered by **KeyWin6-Pro**

Key/Asset Management Software with Total Accountability

KeyWin6-PRO

Gives you total control. Easy to use, Easy to Manage

Flexible KeyWin6 makes it easy to manage everything from around 10 keys up to several thousand keys. You can use one key cabinet or 100 key cabinets in the same key management system and at different locations. The key management system can be managed by a single administrator, or shared with other administrators.

Users, groups and keys are simple and quick to register. You determine which users and groups get which keys by connecting them in the key management system. Every use of the key is registered, and a simple search lets you find out who has had what key and when.

KeyWin6-Pro

Countdown Function Feature

This function determines how many times the user can enter the key cabinet, value box or compartment

KeyWin6-Pro

Provides total Control of your keys - Even from the other side of the world

KeyWin6 keeps your keys in order. You can easily connect via TCP/IP and communicate via the network connection so you can simply administer and program your Key control series key cabinet, whether you are in the same office block or anywhere in the world.

You log into the key cabinet as a user using your personal code. Each key has a key peg with a unique identity, which is placed in a strip that in turn communicates with the KeyWin6 key management program, where each separate event is registered. The key strips then indicate which keys you have access to or, if a key has already been removed, you receive information on the display about who is using the key. You can also search for historic information about keys in KeyWin6 program.

KeyWin6-Pro Loaded with Features

Easy to Use

The administrator determines the members of staff who have access to a specific key by entering which user can log into the key cabinet or value box with his or her personal code.

Create User Groups

You can simplify administration when there are many users with different access rights by creating groups. It is possible to create both key groups and user groups

Name Keys

You give each key a name of your choice, or a key ID, to create order in your key management.

Intelligent Search Functions The search function finds everything in KeyWin, since it searches on files, email, contacts, groups, alarms, etc. - as fast as you type.

Visual Cabinet View Gives you the option to view the key cabinet's status and edit the keys in the key cabinet.

Time Channel Limit a group's use by setting a time channel. The group's keys are available when the time channel is active.

Event Log All events are registered in the log, both from key cabinets and from KeyWin5. You choose what will be shown. The intelligent search function, with select options and timeframe, simplifies obtaining the right information and producing reports

Backup You can easily create backups for the entire key management program. They are automatically named with the date and time; it is just as simple to restore the backup as it is to create it

Alarm Indication When you receive an alarm, the alarm is clearly marked by a red event in the event log and you can easily see who or what has triggered the alarm

Export You can always make a backup of the event log. Either via a CSV file which you can import to Excel or direct to a PDF file

Communication Settings You have a number of possible communication settings that can be synchronized with your network.

Alarm Settings You can choose between many different alarms for your key cabinet. For example, door alarm, key alarm, break-in alarm, etc.

KeyWin6-Pro Software for Key/Asset Management Systems

The Key-Box series smart range of electronic key cabinets/Lockers with electronic key identification for monitoring and control of each individual key/assets. The Key-Box/ Locker system administration is performed using the PC program keyWin6 Pro, where all events are logged and saved
